

## **Brandon Miller: Radar Control**

"As a radar controller I need to know as soon as possible if I've asked you to do something that's unmanageable to you. I need to know if you're too high, too fast and I need to know as soon as I can, so that I can formulate a new plan to ensure that my sequence works for everybody behind you and everybody in front of you. I need to know if I've asked you to do something that the aircraft can't do, you as a pilot can't do or you're uncomfortable with doing, so that I can plan for everybody in front of you and behind you and set a new sequence if necessary."
